Excerpts from AOPA's BasicMed web site

If you've never held a FAA medical certificate, you need to get one from an aviation medical examiner (AME) one time only. If your regular or special issuance medical certificate lapsed more than 10 years before July 15, 2016, you need to get a medical certificate from an AME one time only. And if you develop certain cardiac, neurological, or mental health conditions, you need a one-time-only special issuance for each condition.

Pilots whose most recent medical certificate has been revoked, suspended, or withdrawn, had his or her most recent application denied, or authorization for special issuance withdrawn, will need to obtain a new medical certificate before they can operate under the new regulations.

At least once every four years (48 months), you'll need to visit a state-licensed physician. At the visit, you'll need to provide your physician with an FAA-generated checklist, and your physician will need to affirm that he or she has performed an examination and discussed all the items on the checklist, including medications, with you. Your physician will have to affirm that he or she is unaware of any medical conditions that, as presently treated, could interfere with your ability to safely operate an aircraft. You will then need to retain the completed checklist with your logbook or in an accurate and legible electronic format. You would only provide it to the FAA if requested, such as during a routine ramp check, an investigation, or enforcement action.

Every two years (24 calendar months), you'll also need to take the free AOPA Medical Self-Assessment Course. You'll need to provide the FAA with some of the same certifications you do today, such as an authorization for the National Driver Register to provide your driving record to the FAA, and a statement that make you unable to operate the aircraft in a safe manner.

Pilots flying under the new rules are allowed to operate "covered aircraft" defined as having maximum certificated takeoff weight of not more than 6,000 pounds and are not authorized to carry more than 6 occupants which are operated while carrying up to five passengers in addition to the pilot in command, at altitudes up to 18,000 feet MSL and at an indicated airspeed of up to 250 knots. Pilots, if appropriately rated, can fly VFR or IFR in "covered aircraft." Pilots flying under the exemption cannot operate for compensation or hire, and must operate within the United States, unless authorized by the country in which the flight will be conducted.

For more details, contact the AOPA Pilot Information Center at 888.462.3976 Monday through Friday, 8:30 a.m. to 6 p.m., Eastern time. For a more in-depth review, consider enrolling in AOPA's Pilot Protection Services program.
